

A Single Intradermal Platform. Multiple Development Stages. One Partner.

Pharma Latch is an intradermal drug delivery platform supporting pharmaceutical partners across the full product lifecycle – from early pre-clinical research through clinical development and commercialisation.

Our devices solve one of the industry's most persistent challenges: consistent, reliable intradermal delivery at every stage of development.

THE PHARMA LATCH PLATFORM

PICO Pre-Clinical Engagement

Precision intradermal delivery for small animal studies

- Designed for pre-clinical research environments
- Improves consistency and reproducibility in small animal models
- Enables earlier, more meaningful engagement with Pharma R&D teams
- Helps generate higher-quality data upstream, reducing downstream risk

WHY IT MATTERS:

Better pre-clinical delivery leads to better translational outcomes.

HOLLOW Clinical & Commercial Readiness

Clinical-ready intradermal delivery

- Designed for use in clinical trials and commercial settings
- Consistent, precise intradermal administration
- Compatible with a wide range of formulations
- Supports simplified training and scalability

WHY IT MATTERS:

A reliable bridge from research to patient.

WHY PHARMA LATCH

- One platform across multiple development stages
- Early Pharma engagement through pre-clinical solutions
- Clinical-ready devices designed for scale
- Reduces variability and de-risks translation
- Attractive lifecycle value for partners and investors

COMING SOON PHARMA LATCH SELF

- Self-administration intradermal delivery device
- Designed for patient-centric use
- Expands the platform into home and outpatient settings

WHO WE WORK WITH

- Pharmaceutical R&D teams
- Clinical development groups
- Drug delivery partners
- Strategic buyers and investors

LET'S TALK

Whether you're looking to:

- Improve pre-clinical intradermal delivery
- Support clinical trial execution
- Explore strategic partnerships or investment
